SplitUp: Project Brief for the Website Build

Build a single-page web app called SplitUp that helps college students split group-project work fairly, track who contributed what, and stay on top of deadlines, in a Discord-style interface. Copy everything below the title into your AI tool as one message.

Background

SplitUp is the prototype for a college Design Thinking project by one student. Survey research with college students targets three pain points: uneven workload, unclear task ownership, and forgotten deadlines scattered across WhatsApp chats. The app must make effort visible and fair. Users are college students aged 17 to 24, mostly on phones, many with slow connections.

Technical requirements

- One self-contained `index.html` file with inline CSS and vanilla JavaScript. No frameworks, build step, backend or external libraries.
- Save all data in `localStorage` inside try/catch, and render correctly when storage is empty or blocked.
- Works offline and opens by double-clicking the file. Also deployable as-is to GitHub Pages or Netlify.
- Escape all user-entered text before inserting it into the page.
- Respect `prefers-color-scheme` (dark default, light variant) and `prefers-reduced-motion`.

Look and feel

Discord-inspired dark theme. Use the original design tokens below, and do not copy Discord's logo or brand assets.

Token	Dark value
Rail background	`#1e1f22`
Sidebar background	`#2b2d31`
Main background	`#313338`

Token	Dark value
Card background	`#383a40`
Text	`#dbdee1`
Muted text	`#949ba4`
Accent	`#5865f2`
Success, warning, danger	`#23a55a` , `#f0b232` , `#f23f42`

System font stack (Segoe UI, system-ui). Rounded server icons on the left that become squarer on hover or when selected. Each member has a coloured circular avatar with their initial.

Layout

- **Desktop:** three columns. A 72px team rail on the left, a 232px channel sidebar, and the main area on the right.
- **Channel sidebar:** team name with "SplitUp" under it, the five channels, the member list with a green online dot, and an invite code box at the bottom.
- **Mobile (under 760px):** the rail and channels become horizontal scrolling tabs at the top, the member list and invite box are hidden, and the task board becomes one column.
- Respect safe-area insets on phones and keep the body from scrolling sideways.

Features

Team rail

One button per team showing its initials. A **+** button opens the create or join screen.

Create or join a team

- Create: project name and comma-separated teammate names. "You" is always added as the first member. Generate an invite code such as `DBMS-482` . Post a Taskbot message with the code and open the new team's chat.
- Join: enter an invite code. If it matches a team on this device, open that team. Otherwise show: "No team found with that code. Check the code and try again."

team-chat

- Message list with avatar, name, time and text, plus a composer at the bottom. Enter sends.
- Command `/task Title @name` creates a To do task for that member (default "You"), due in 7 days, and the Taskbot confirms in chat. Messages from Taskbot carry a BOT tag.

task-board

- Three columns: To do, In progress, Done, each with a count.
- Each card shows the title, an assignee chip in that member's colour, and the due date. A button moves it forward one step (To do to In progress to Done). Done cards have no button.
- Form above the board: title, assignee dropdown, due date (default 7 days ahead), and an **Add task** button.
- When a task reaches Done, Taskbot posts "[Name] finished [task]. Nice work!" in the chat.

contributions (the key feature)

- Large count of tasks done out of total.
- One row per member: avatar, name, a coloured progress bar showing their share of completed tasks, the percentage, and "(done of assigned tasks)".
- Warning card when at least 3 tasks are done and one member holds more than the fair share plus 20 percentage points of completed work. For example, with 4 members the fair share is 25%, so warn above 45%. Name that member and suggest moving open tasks.
- Warning card for any member who has assigned tasks and none finished.

deadlines

- Large countdown to the submission date: green above 3 days, amber for 3 days or fewer, red with "X days late" once passed.
- Editable submission date.
- List of open tasks sorted by due date, with an Overdue tag for anything past due.

peer-feedback

- One 1 to 5 star rating per teammate, excluding the current user. Explain that ratings are private and the teacher sees averages only.
- After the first rating, show a "Teacher view" card listing each teammate's rating to one decimal place.

Data model

Object	Fields
App state	`teams[]`, `activeTeamIndex`, `activeChannel`
Team	`name`, `code`, `deadline` (YYYY-MM-DD), `members[]`, `tasks[]`, `msgs[]`, `fb{memberName: rating}`
Task	`id`, `title`, `assignee`, `status` (0 To do, 1 In progress, 2 Done), `due`
Message	`author`, `text`, `time`, `isBot`

Demo data on first load

Team 1, "DBMS Mini Project", with members You, Aisha, Rohan and Meera, and a deadline 10 days ahead. Six tasks: Draw ER diagram (Aisha, Done, 2 days overdue), Write SQL schema (Rohan, Done), Build login module (Rohan, Done), Prepare report draft (Meera, In progress), Make presentation slides (Aisha, To do), Test and fix bugs (You, To do). Rohan has done 2 of the 3 finished tasks, so the uneven-workload warning shows immediately. Add three starter chat messages. Team 2, "Marketing Case Study", with You, Dev and Sana and one task.

Quality bar

- Visible keyboard focus, labels or aria-labels on inputs and icon buttons, and text contrast of at least 4.5:1.
- Plain, active-voice copy. Buttons say what they do, such as "Add task" and "Create team".

- Empty states tell the user what to do next instead of showing blank space.
- No console errors, and the app still works after a page reload.

Out of scope

Login, real-time sync between devices, file uploads, push notifications, and a database. Mention these as future work only.

Done when

- [ ] A new task can be added from the board and from the `/task` command.
- [ ] Moving a task to Done updates the contribution bars and posts a Taskbot message.
- [ ] The workload warning appears for the demo data and disappears when work is spread evenly.
- [ ] The deadline countdown changes colour correctly and can be edited.
- [ ] Creating a team, switching teams and joining by code all work.
- [ ] Data survives a page reload.
- [ ] The layout works at 375px wide and at 1280px wide.

What to send back

The complete `index.html` file in one code block, followed by three lines on how to run or deploy it.
